IN THE CLAIMS

- 1-21 (canceled)
- 22. (currently amended) A method of conducting polymerizations in nonaqueous miniemulsions,

comprising producing a <u>nonaqueous</u> miniemulsion from <u>comprising</u> reactants of a polymerization in a nonaqueous fluid dispersing medium, using a surfactant and an osmotically stabilizing component, and <u>polymerizing said reactants</u>, wherein said miniemulsion contains not greater than 10% by weight water is reacted.

- 23. (previously presented) The method as claimed in claim 22, wherein the polymerization is selected from addition polymerization reactions, polyaddition reactions, and polycondensation reactions.
- 24. (previously presented) The method as claimed in claim 23, wherein the polymerization comprises an addition polymerization of acrylic or styrene monomers.
- 25. (currently amended) The method as claimed in claim 23, wherein the polymerization comprises a polyaddition of polyfunctional epoxides with at <u>least</u> lest one of hydroxy, amino and thiol compounds.
- 26. (previously presented) The method as claimed in claim 23, wherein the polymerization comprises a polyaddition of polyfunctional isocyanates with at least one polyfunctional hydroxy or amino compounds.
- 27. (previously presented) The method as claimed in claim 23, wherein the polymerization comprises a polycondensation of polyfunctional carboxylic acids with polyfunctional hydroxy or amino compounds.

-3-

25433882.1

- 28. (previously presented) The method as claimed in claim 22, wherein a miniemulsion is formed from a disperse phase of polar reactants in a continuous apolar organic phase.
- 29. (currently amended) The method as claimed in claim 28, wherein hydrophilic substances, especially water or salts, are used as said osmotically stabilizing component is a hydrophilic substance.
- 30. (previously presented) The method as claimed in claim 22, wherein a miniemulsion is formed from a disperse phase of apolar reactants in a continuous polar organic phase.
- 31. (previously presented) The method as claimed in claim 30, wherein hydrophobic substances are used as osmotically stabilizing component.
- 32. (previously presented) The method as claimed in claim 31, wherein the osmotically stabilizing component is added in an amount of from 0.1 to 40% by weight based on the overall weight of the emulsion.
- 33. (previously presented) The method as claimed in claim 32, wherein the average particle size of the emulsion is situated in the range from 30 to 600 nm.
- 34. (previously presented) The method as claimed in claim 33, wherein an emulsion is produced which is critically stabilized or thermodynamically stable with respect to an alteration in particle size.
- 35. (previously presented) The method as claimed in claim 34, wherein the emulsion further comprises dispersed therein particulate solids.
- 36. (previously presented) The method as claimed in claim 35, wherein the polymerization takes place without substantial alteration in the particle size.

25433882.1 -4-

- 37. (previously presented) The method as claimed in claim 22, wherein an inorganic polymerization is conducted in which a miniemulsion is produced from at least one of the reactants of an inorganic polymerization and is reacted.
- 38. (currently amended) The method as claimed in claim 22, wherein the inorganic polymerization comprises a <u>step of</u> preparation of metal salt particles, metal oxide particles or metal sulfide particles.
- 39. (previously presented) The method as claimed in claim 37, wherein a miniemulsion is formed from a disperse phase of an apolar reactant in a continuous polar organic phase.
- 40. (previously presented) The method as claimed in claim 37, wherein a miniemulsion is formed from a disperse phase of a polar reactant in a continuous apolar organic phase.
- 41. (previously presented) The method as claimed in 37, wherein the reaction takes place by addition of a further reactant of the inorganic polymerization by way of the continuous phase of the emulsion.
- 42. (previously presented) The method as claimed in claim 37, wherein the reaction takes place by addition of a further reactant of the inorganic polymerization by way of a further miniemulsion.
 - 43. (new) The method of claim 29, wherein said hydrophilic substance is water or a salt.
- 44. (new) The method of claim 22, wherein said microemulsion comprises from 0.2 to 10% by weight water.
